

ALPAN ORTHODONTICS

Dr. David Alpan and Associates

Dr. David Alpan, DDS, MSD, Ltd

What does your smile look like in your selfies? Does your smile resemble all the contestants for the Miss America pageant? What does your smile look like? Are you hiding your teeth, or showing off your pearly whites? Smile with confidence after Alpan orthodontics has transformed your smile. "If a visit to the Orthodontist sends shivers up your spine, know that orthodontics has made many advances to improving the experience," says, Dr. David Alpan of Alpan Orthodontics. A beautiful, healthy, natural looking smile is our goal, without the use of anything noticeable or obtrusive while you are going through your transformation. "In the past, braces meant headgear & a mouth full of shiny metal. Now there are clear, hidden, accelerated, & painless options, including

Invisalign, which eliminates the need for braces," says Dr. Alpan. Incognito hidden lingual (tongue side) braces can offer a full range of correction with nothing visible at all. There is also 3D impression-less video image capture to avoid traditional messy teeth molds. Another advancement includes accelerated treatment, which reduces time in treatment and overall pain or sensitivity. This third-generation orthodontist also specializes in treating TMJ (temporomandibular joint), obstructive sleep apnea, and facial pain. With advancements like 3D CBCT scanning Dr. Alpan can screen, treat and prevent airway issues from the past or in the future.
